Overview

Hill Top Research, Inc. conducts superior full-service clinical research for the personal care, household products, medical devices, oral care, and OTC and Rx pharmaceutical industries. We help our customers bring safe and effective products to the market more quickly.

We have sites throughout the USA, Canada and the UK and we manage studies in North America and Europe through our CRO services group. We have a full-service microbiology laboratory to support clinical research studies as well as capabilities in testing oral care products, topical antimicrobials, disinfectants and preservatives for efficacy.

Clinical Research Experience

Hill Top Research conducts clinical studies that deliver the most accurate, comprehensive clinical data for customers developing Consumer and Medical products. Development time is saved through an efficient network of dedicated research centers that ensure timely patient enrollment and quality through standardized operations. Patient recruitment is optimized through use of a localized computerized database with more than 10,000 patients at each location (125,000+ in aggregate). Hill Top's clients receive the competitive advantage of superior quality service in the shortest time in the industry. Our clients include major consumer and pharmaceutical product manufacturers.

Therapeutic Expertise

Hill Top has expertise in testing and consultation in a broad range of product categories including Cosmetics, Skin Care, Personal Care, Oral Care, Antimicrobials, Medical Devices, Rx-to-OTC switches, Dietary Supplements, Household products, Chemicals and Food products. In pharmaceutical and OTC products, Hill Top has experience in many different therapeutic categories including:

Facility Description

We conduct safety, efficacy, sensory evaluation and claim substantiation research on Consumer, OTC Pharmaceutical and Rx-to-OTC switch products at nine company owned research centers. Each research center is approximately 8,000 sq. ft. with 30-40 technical and medical professionals. Research centers are equipped with appropriate medical equipment and bioinstrumentations necessary for the conduct of a clinical trial.

Other Information

Our commitment to quality ensures clean data, accelerating clinical development time. Hill Top's independent Quality Assurance (QA) unit conducts internal FDA-style audits, interprets regulations, provides training and monitors the Quality Control (QC) program. QC ensures clean data thereby reducing monitoring time and minimizing data edits. Combined QC and QA deliver consistency and standardization across all Hill Top Research centers.
